

BTS Platform & Member Benefits

The **BTS platform** is a rewards-based membership system that enables members to participate in the distribution of value across multiple projects within its ecosystem. These projects include the **GODL token**, which is referenced to the price of gold.

BTS allocates a portion of its profits towards film productions and gold extraction initiatives, with resulting proceeds being redistributed to members in the form of rewards and/or GODL tokens.

In addition, **BTS** operates a sales-based referral program through which members may be rewarded on multiple levels for introducing new participants who enrol as **BTS** members or purchase the **GODL token**.

BTS Member Benefits

A Behind-the-Scenes Membership Ecosystem - BTS is a rewards-based membership platform built on radical transparency.

Members gain genuine insight into how real-world projects are structured, developed and monetised — not just the end result.

Why BTS Stands Out

Radical transparency - BTS provides a rare behind-the-curtain view of how value is created across multiple industries - something most platforms never openly share.

A real ecosystem, not a single product - Members participate in the distribution of value generated across several active initiatives, all connected through the BTS platform.

Access, not promises - BTS is not built on guarantees or speculation. Membership provides access, individuals choose how and whether they engage.

Core BTS Initiatives & GDL

- A utility token referenced to the price of gold, as the price of gold increases so too does the GDL token
- Each GDL unit aligns to 1 gram of real gold pricing
- Used as a digital interface for gold-linked execution

Film Production Ventures

- BTS allocates capital to selected film projects
- Project performance feeds back into the ecosystem
- Members benefit through the platform's reward structure

Gold Extraction Projects

- Real-world mining initiatives
- **Visible “earth-to-asset” execution cycle**
- On-the-ground operations, not remote reporting

A portion of profits generated from these initiatives is redistributed to the **BTS ecosystem** in the form of member rewards.

Referral & Participation

BTS also operates a sales-based referral program - Members are rewarded across multiple levels for introducing new participants who choose to:

- Enroll as **BTS members**
- Purchase **GODL tokens**

Participation is optional and self-directed.

Where GODL Fits

The Gold-Referenced Utility Token

For **BTS members**, **GODL** provides:

- Gold-referenced pricing
- Digital access to execution
- Participation without holding or storing physical gold

Gold sets the reference. GODL is the interface.

How BTS Members Access Gold Exposure - Without Holding Gold

Through **GODL**, members can:

- Reference gold pricing derived from real execution
- Interact with gold-linked value digitally
- Avoid storage, insurance, transport and operational risk

On-the-Ground Execution

Operations in Tanzania are supported by a permanent on-site presence, overseeing:

- Sourcing and handling of gold-bearing material
- Processing, smelting and quality control
- Gold doré production
- Regulatory compliance
- Lawful sale and export coordination

No remote supervision. No third-party guesswork.

Tri-partied interaction:

- **Raven Minerals Ltd** - mining gold across Tanzania
- **OODL Marketplace (OMP)** - purchases gold from Raven
- **BTS** - acquires gold via their OMP online account
- **BTS members interact via GODL, not via gold ownership**

This is execution-backed pricing, not speculation.

Optional Sell-Back Feature - For convenience, **BTS** offers a sell-back service, allowing members to sell **GODL** back to **BTS** at the prevailing daily gold spot reference price.
